# The Sovereign Baseline: Real-Time Market Calibration

This final snapshot, dated April 9, 2026, establishes the "Quiet Phase" baseline prior to the Global Auction launch. Note that despite a deliberate reduction in public output, the OPTe Heat Trend remains pinned at +100. This confirms a state of sustained institutional surveillance; the "Old Guard" and their analysts have not looked away.

While the general growth trend reflects the pre-launch 'quiet phase,' the underlying heat confirms the market is in a state of high-alert.
