

OFFICIAL NOTICE: Q3 GLOBAL SOVEREIGN AUCTION RE-INDEX

JUL 1, 2026 | OFFICIAL NOTICE

THE \$2 BILLION GLOBAL SEP INFRASTRUCTURE MANDATE

Prior Notices Referenced:

- [THE GLOBAL SOVEREIGN AUCTION IS ACTIVE](#)
- [Market Convergence Re-index: The \\$1 Billion Infrastructure Mandate](#)

1. Recalibration of the Unified Capital Mandate

Effective July 1, 2026, OPTe Inc. has finalized its scheduled Quarter 3 re-index. The Unified Capital Mandate is officially adjusted to **\$2,000,000,000.00** (structured as 90% Primary / 10% Secondary).

This adjustment reflects the transition from platform-specific market enclosure (the private platform layer at opte.io) to the full technical enclosure of the **OPTe ASOS™ Standard Essential Patent (SEP) Perimeter** (the infrastructure layer at opte.ai).

2. Core Sovereign Indices (Q3 Basis)

- **Unified Capital Mandate:** \$2,000,000,000.00
- **Starting Fully Diluted Equity Offered (July 1):** 22.62%
- **Target Ending Fully Diluted Position (Q4 End):** 14.43%
- **Daily Velocity Tax:** \$27,400,000.00 / day (Unified Re-Index)

Technical Recalibration of the Opportunity Velocity Tax

Concurrent with the Q3 Sovereign Re-Index, the Daily Velocity Tax is adjusted to **\$27,400,000.00 / Day** (calculated as an identical 1.37% Infrastructure Friction Coefficient relative to the expanded \$2B baseline).

This recalibration preserves the structural link to our underlying \$60 Billion Sovereign Patent Portfolio. With category-creation risk entirely eliminated and the OPTe ASOS™ structural enclosure established, the cost of systemic idle time has doubled.

The deployment engine is now idling at a non-recoverable fiduciary cost of **\$1,141,666.66 per hour**. The equity decay curve will adjust programmatically at 00:00 UTC daily.

3. The Strategic Basis For The \$2B Expansion

The previous \$1B mandate addressed the direct Sovereign Standard for legacy content management systems (i.e., WordPress) and immediate platform-specific integrations. The \$2B mandate accounts for macro-economic rails that sit outside the [OPTe private platform](#), establishing [OPTe ASOS™](#) as the definitive *Essential Industrial Standard* for the global software supply chain:

1. Autonomous Agent-to-Agent (A2A) Commerce

The activation of the definitive essential rail for A2A commerce. This infrastructure provides the sovereign, secure transaction frameworks necessary for autonomous buyer and seller proxies to negotiate, validate, and execute contracts globally without reliance on legacy payment or database silos.

2. Sovereign Governance

Supply Chain Integrity: Utilizing the Sovereign Command Interface (SCI) to establish the Standard for Software Lifecycle Governance, stripping technical debt and terminal decay via autonomous forking and code hardening.

3. Web3 & Repository Decentralization

The programmatic tokenization of software repositories. By scoring technical utility recursively across decentralized nodes, the OPTe ASOS™ architecture programmatically solves the "Tragedy of the Commons" in open-source systems, converting legacy software assets into tokenized, sovereign utilities.

4. Participation Protocol

The [Sovereign Auction](#) is structured exclusively for long-term capital allocators, multi-family offices, and Sovereign Wealth partners utilizing an Evergreen framework. OPTe has rejected the traditional venture capital milestone treadmill to maintain absolute operational and strategic sovereignty.

The public tier of the [Sovereign Data Room](#) offers a fully stabilized mathematical playing field based on the baseline indices. Detailed governance terms, tranche milestones, and capital alignment mechanisms are strictly reserved for verified partners. OPTe will not negotiate baseline metrics or delegate structural terms in public spaces.

The execution of a compliant, authorized Letter of Intent (LOI) is the sole gateway required to arrest the active daily decay clock, lock in the current day's equity basis, and trigger authorized entry to the secure Stage 2 Accelerated Diligence Vault.
